

# SURGYS® G40-FE

## Surge arrester- Type 1 and 2

for installations with lightning conductor and for sensitive loads

Electronic protection

new

SURGYS G40-FE 2 poles

### The solution for

- > Industry
- > All types of building (critical, non-critical)

### Strong points

- > Recommended where there is a risk of direct impact from lightning strikes
- > Varistor / gas spark gap technology
- > End of life signal
- > Remote signalling
- > Thermal disconnector

### Compliance with standards

- > NF EN 61643-11
- > IEC 61643-11

### Function

The SURGYS® G40-FE surge arrester is designed to ensure the protection of your low voltage distribution installations and your electrical equipment. It acts against industrial operation surges and surges owing to lightning.

This type of surge arrester is particularly recommended where there is a risk of direct impact of lightning strikes, especially at the main switchboard level when electronic devices sensitive to surges are installed.

**NEW:** Versions 4 P compatible with IT and TT arrangements.

### Advantages

#### Recommended where there is a risk of direct impact from lightning strikes

With its max. impulse current  $I_{imp}$  (10/350  $\mu$ s surge) of 15 kA, it is recommended for use at the top of the installation.

#### Varistor / gas spark gap technology

This solution guarantees an optimised level of protection (low voltage  $U_p=1.5$  kV) and improved coordination between type 1 & type 2.

#### End of service life indicator

Indicates internal components' end-of-life.

#### Remote signalling

With the remote signalling contact (plug-in) you can upload the alert to a supervisory device.

#### Thermal disconnector

The surge arrester's internal disconnection device safeguards the system at the SPD's end-of-life.

### Applications

- Main switchboard or main distribution panel of a building, equipped with electronic devices (multi-function measurement devices, PLC, etc.) with presence of lightning conductors or protection through meshed cages.
- Main switchboard equipped with electronics in buildings subjected to high level risk of lightning strikes such as classified installations, installations located in areas prone to high density of lightning strikes, high-rise buildings.
- Main switchboard equipped with PLC, BMS, remote monitoring, technical alarms, modems...
- High-rise building safety main switchboard.
- Lift control panel located at an elevated level within a building.
- Safety inverter units.
- Main switchboard or remote sites containing electronics.

srgys\_017\_e\_1\_gpb\_cat

### Front panel

1. End of life signal.
2. Earthing comb bridging connection.
3. Remote signalling contact.
4. DIN rail mounting.

### General characteristics

- Surge arrester- Types 1 and 2.
- Designed to withstand discharge currents linked to direct lightning strikes.
- Protection level Up improved at 1.5 kV.
- Guaranteed protection in common mode.
- End of service life indicator.
- Remote signalling contact.
- Absence of follow current.
- Recommended fuse combination switch FUSERBLOC (see page 254).

### Switch body

Type	monobloc module
Dimensions W x H x D - 2 pole device	72 x 90 x 67 mm
Dimensions W x H x D - 3 pole device	108 x 90 x 67 mm
Dimensions W x H x D - 4 pole device	144 x 90 x 67 mm
Case degree of protection IP20	IP20
Terminal block degree of protection IP20	IP20
Case material	thermoplastic UL94-V0
Mains connection cross-section	6 ... 35 mm <sup>2</sup>
Earthing connection cross-section	6 ... 35 mm <sup>2</sup>

### Specifications

#### Mains

Mains type	230 / 400 VAC	
Neutral arrangement (see table)	TT, TN, IT	
Connection mode	MC <sup>(1)</sup>	MC <sup>(1)</sup> / MD <sup>(2)</sup>
Nominal voltage U <sub>n</sub>	400 VAC	230 VAC
Max. voltage U <sub>c</sub>	440 VAC	255 VAC

#### Protection characteristics

Temporary overvoltage withstand @ 5 sec (U <sub>T</sub> )	580 VAC withstand	335 VAC withstand
Temporary overvoltage withstand @ 120 sec (U <sub>T</sub> )	770 VAC disconnection	440 VAC disconnection
Temporary overvoltage from a HV mains, between N & PE in a TT arrangement		1200 V / 30 A / 200 ms withstand
Level of protection U <sub>p</sub>	1.5 kV	1.5/1.5 kV
Max. current discharge (1 impulse 8/20 μs) I <sub>max</sub>	70 kA	70 kA
Nominal discharge current (15 impulses 8/20 μs) I <sub>n</sub>	25 kA	25 kA
Residual voltage at limp	1.5 kV	1.5/1.1 kV
Impulse current (1 shock 10/350 μs) I <sub>imp</sub>	25 kA (15 kA*)	25 kA (15 kA*)

#### Associated characteristics

Residual current I <sub>pe</sub>	< 10 μA
Response time t <sub>r</sub>	< 100 ns
Follow current I <sub>f</sub>	None
Admissible short-circuit current I <sub>sccr</sub>	50 kA (100 kA*)
Recommended disconnector	gG 315 A (125 A*) fuses
Type of mechanical disconnection indicator	Mechanical
Number of disconnection indicators	1

#### Remote signalling contact

Number of contacts per pole	1
Contact type	Inverter
AC making capacity	0.5 A
DC making capacity	3 A
AC nominal voltage	250 VAC
DC nominal voltage	30 VDC
Sustained current	2 A
Connection type	Plug-in screw terminal
Max. cross-section of terminal connections	1.5 mm <sup>2</sup>

#### Operating conditions

Operating temperature range	-40 ... +85°C
Storage temperature range	-40 ... +85°C

(1) MC: Common mode.

(\*) used in association with gG 125 A fuse

(2) MD: Differential mode.

### Connections

#### Series arrangement

#### Parallel arrangement
